MISSION: SEASON PATROL

The Pointer

Instructions:

1. Cut out the wheel on Page 1 along the dashed line
2. Cut out the arrow pointer on this page
3. Poke a hole through the centre of the wheel and the dot
4. Push a split pin (paper fastener) through both holes
5. Now spin the arrow to see what season the Southern

Hemisphere is in!

Remember:

When it's SUMMER in the Southern Hemisphere, it's WINTER in the Northern Hemisphere!

Scout says:

Spin your wheel and see how the seasons change! The Earth's tilted axis is what makes this happen.
